

# Cloud Computing

vBoxxCloud

## » Crash Course «

What is the Cloud?

The first important point:  
The cloud is not a physical thing

What?

"The Cloud" is a network of servers

Now you would like to know the benefits, right?

Cloud Computing means storing as well as accessing data and programs over the Internet, instead of your computer's hard drive.

What about Cloud Computing?

Your files on any device

Sharing files

Access to your files everywhere and anytime

Working together in an online environment

So, where does my data go?

Your data goes to large, secured data centers, depending on your Cloud Provider.

Okay, is that save?

You should have a trustworthy Internet Connection

Choose a Cloud Provider that gives you security guarantees, like encryption

Let the Cloud Provider back up your data

Select a personalized Cloud Solution

What do other companies use the Cloud for?

Yes, it is. Check the tips in the trees

24% Virtual desktops  
28% SaaS  
31% Storage  
33% CRM

34% Collaboration  
38% Backup & Disaster Recovery  
40% Testing & Development  
46% E-mail
